# Lecture Note <br> Application of Fuzzy Logic 

Akira Imada<br>Brest State Technical University

Last modified on 22 December 2015

## I. Fuzzy Basic Arithmetics

## 1. Membership Function

## 2. AND and OR

## 3. IF-THEN

## II. Fuzzy Controller

## 1. Controll two metro cars using Speed, Distance, and Brake

## Excercise

1. Design a virtual loop with 1000 pixels on which two metro cars run .
2. Put two cars on the loop each of which run with a speed of 20 pixels per step.
3. Change speed in 2. by adding -2, $-1,0,+1$, or +2 at random.
4. Stop the animation when a crash occurs.
5. Show the animation on the screen
6. Store the animation in GIF format

## 2. Defuzzification by Center of Gravity

## Excercise

1. Design 10 membreship function for Speed (0-50), Distance (0-1000) each of which being made up of Very Small, Small, Medium, Large, Very Large.
2. Create a part of a rule such as Speed $=(\ldots)$ AND Distance $=(\ldots)$.
3. Calculate the membership function of 2.
4. Draw the 3-D graph of 3 .

## 3. Three Dimensional surface: Brake on Speed and Distance

## Excercise

1. Design 15 membreship function for Speed (0-50), Distance (0-1000) and brake (0-10) each of which being made up of Very Small, Small, Medium, Large, Very Large.
2. Create one rule such as IF Speed $=(\ldots)$ AND Distance $=(\ldots)$ THEN Brake $=(\ldots)$.
3. Calculate the membership function of 2.
4. Show a table of 3. with 6 columns: speed; its $\mu$; distance; its $\mu$; brake; its $\mu$; total $\mu$.

## Excercise

1. Create 2 rules of the form IF Speed $=(\ldots)$ AND Distance $=(\ldots)$ THEN Brake $=(\ldots)$.
2. Calculate the membership function of these two rules of 1 .
3. Show a table of 3. with 6 columns: speed; its $\mu$; distance; its $\mu$; brake; its $\mu$; total $\mu$.

## Excercise

1. Create 10 rules of the form IF Speed $=(\ldots)$ AND Distance $=(\ldots)$ THEN Brake $=(\ldots)$.
2. Calculate the membership function of these two rules of 1 .
3. Show a table of 3. with 6 columns: speed; its $\mu$; distance; its $\mu$; brake; its $\mu$; total $\mu$.
4. Add one column of brake by calculating the Center of Gravity of each 10 brakes corresponding each set of Speed-Distance pair.
5. Draw a 3-D surface of Speed(x)-Distance(y)-Brake(z).

## III. Fuzzy Classification

## An example of classification - 3 families of fish

Family B

Family C

## 1. Rules to classify as an example

$R_{1}$ : IF $X_{1}=$ medium $A N D X_{2}=\operatorname{small} \operatorname{THEN} A$
$R_{2}:$ IF $X_{1}=$ small $\operatorname{AND} X_{2}=\operatorname{medium}$ THEN $B$
$R_{3}:$ IF $X_{1}=$ large AND $X_{2}=$ small then $C$

Memership function for the size of two parts

$$
\mu(x)=\exp \left\{-\frac{(x-a v g)^{2}}{\sigma^{2}}\right\}
$$

## Qestion: Which family is this new fish?

## 2. Takagi Sugeno Formula

## 1. Singleton Consequence

$R_{k}$ : If $x_{1}$ is $A_{1}^{k}$, and $x_{2}$ is $A_{2}^{k}$ and $\cdots$ and $x_{N}$ is $A_{N}^{k}$ then $y$ is $g^{k}$.

## Takagi-Sugeno rules: Estimation of a single input

Estimation of $y$ for an input $\mathbf{x}=\left(x_{1}, x_{2}, \cdots, x_{N}\right)$

$$
y_{j}=\frac{\sum_{k=1}^{H}\left(M_{k}(\mathbf{x}) \cdot g_{k}\right)}{\sum_{k=1}^{H} M_{k}(\mathbf{x})}
$$

where

$$
M_{k}(\mathbf{x})=\prod_{i=1}^{N} \mu_{i k}\left(x_{i}\right)
$$

where $\mu_{i k}$ is $i$-th attribute of $k$-th rule

## Three rules to classify

## A benchmark - Iris database

Iris flower dataset (taken from University of California Urvine Machine Learning Repository) consists of three species of iris flower setosa, versicolor and virginica.
Each sample represents four attributes of the iris flower sepal-length, sepal-width, petal-length, and petal-width.

## Iris Flower Database

| Setosa |  |  |  | Versicolor |  |  |  |  |  |  |  |  |  | Virginica |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ | $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ | $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ |  |  |  |  |  |
| 0.65 | 0.80 | 0.20 | 0.08 | 0.89 | 0.73 | 0.68 | 0.56 | 0.80 | 0.75 | 0.87 | 1.00 |  |  |  |  |  |
| 0.62 | 0.68 | 0.20 | 0.08 | 0.81 | 0.73 | 0.65 | 0.60 | 0.73 | 0.61 | 0.74 | 0.76 |  |  |  |  |  |
| 0.59 | 0.73 | 0.19 | 0.08 | 0.87 | 0.70 | 0.71 | 0.60 | 0.90 | 0.68 | 0.86 | 0.84 |  |  |  |  |  |
| 0.58 | 0.70 | 0.22 | 0.08 | 0.70 | 0.52 | 0.58 | 0.52 | 0.80 | 0.66 | 0.81 | 0.72 |  |  |  |  |  |
| 0.63 | 0.82 | 0.20 | 0.08 | 0.82 | 0.64 | 0.67 | 0.60 | 0.82 | 0.68 | 0.84 | 0.88 |  |  |  |  |  |
| 0.68 | 0.89 | 0.25 | 0.16 | 0.72 | 0.64 | 0.65 | 0.52 | 0.96 | 0.68 | 0.96 | 0.84 |  |  |  |  |  |
| 0.58 | 0.77 | 0.20 | 0.12 | 0.80 | 0.75 | 0.68 | 0.64 | 0.62 | 0.57 | 0.65 | 0.68 |  |  |  |  |  |
| 0.63 | 0.77 | 0.22 | 0.08 | 0.62 | 0.55 | 0.48 | 0.40 | 0.92 | 0.66 | 0.91 | 0.72 |  |  |  |  |  |

(to be cont'd to the next page)

| Setosa |  |  |  | Versicolor |  |  |  |  | Virginica |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ | $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ | $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ |  |
| 0.56 | 0.66 | 0.20 | 0.08 | 0.84 | 0.66 | 0.67 | 0.52 | 0.85 | 0.57 | 0.84 | 0.72 |  |
| 0.62 | 0.70 | 0.22 | 0.04 | 0.66 | 0.61 | 0.57 | 0.56 | 0.91 | 0.82 | 0.88 | 1.00 |  |
| 0.68 | 0.84 | 0.22 | 0.08 | 0.63 | 0.45 | 0.51 | 0.40 | 0.82 | 0.73 | 0.74 | 0.80 |  |
| 0.61 | 0.77 | 0.23 | 0.08 | 0.75 | 0.68 | 0.61 | 0.60 | 0.81 | 0.61 | 0.77 | 0.76 |  |
| 0.61 | 0.68 | 0.20 | 0.04 | 0.76 | 0.50 | 0.58 | 0.40 | 0.86 | 0.68 | 0.80 | 0.84 |  |
| 0.54 | 0.68 | 0.16 | 0.04 | 0.77 | 0.66 | 0.68 | 0.56 | 0.72 | 0.57 | 0.72 | 0.80 |  |
| 0.73 | 0.91 | 0.17 | 0.08 | 0.71 | 0.66 | 0.52 | 0.52 | 0.73 | 0.64 | 0.74 | 0.96 |  |

| 0.68 | 0.89 | 0.19 | 0.16 | 0.71 | 0.68 | 0.65 | 0.60 | 0.82 | 0.68 | 0.80 | 0.72 |  |
| 0.65 | 0.80 | 0.20 | 0.12 | 0.73 | 0.61 | 0.59 | 0.40 | 0.97 | 0.86 | 0.97 | 0.88 |  |
| 0.72 | 0.86 | 0.25 | 0.12 | 0.78 | 0.50 | 0.65 | 0.60 | 0.97 | 0.59 | 1.00 | 0.92 |  |
| 0.65 | 0.86 | 0.22 | 0.12 | 0.71 | 0.57 | 0.57 | 0.44 | 0.76 | 0.50 | 0.72 | 0.60 |  |
| 0.68 | 0.77 | 0.25 | 0.08 | 0.75 | 0.73 | 0.70 | 0.72 | 0.87 | 0.73 | 0.83 | 0.92 |  |
| 0.65 | 0.84 | 0.22 | 0.16 | 0.77 | 0.64 | 0.58 | 0.52 | 0.71 | 0.64 | 0.71 | 0.80 |  |
| 0.58 | 0.82 | 0.14 | 0.08 | 0.80 | 0.57 | 0.71 | 0.60 | 0.97 | 0.64 | 0.97 | 0.80 |  |
| 0.65 | 0.75 | 0.25 | 0.20 | 0.77 | 0.64 | 0.68 | 0.48 | 0.80 | 0.61 | 0.71 | 0.72 |  |
| 0.61 | 0.77 | 0.28 | 0.08 | 0.81 | 0.66 | 0.62 | 0.52 | 0.85 | 0.75 | 0.83 | 0.84 |  |

## Excercise

1. Design 3 membership functions for Very Small, Small, Medium, Large, Very Large all from 0 to 1.
2. Create 10 rules of the form IF $x_{1}=(\ldots)$ AND $x_{2}=(\ldots)$ AND $x_{3}=(\ldots)$ AND $x_{4}=(\ldots)$ THEN class $=(A, B$ or $C)$.
3. Create a black-box whose inputs are $x_{1}, x_{2}, x_{3}$ and $x_{4}$ and output is class.
4. Input all the 150 data one by one and record output.
5. Show the table whose columns are $x_{1} ; x_{2} ; x_{3} ; x_{4} ;$ real class; and predicted class.
6. Calculate overall success rate.

## Result

| $A, B$ or $C$ | $x_{1}$ | $x_{2}$ | $x_{3}$ | $x_{4}$ | $g$ | $\hat{y}$ | OK or NOT |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $A$ | 0.65 | 0.80 | 0.20 | 0.08 |  |  |  |
| $A$ | 0.62 | 0.68 | 0.20 | 0.08 |  |  |  |
|  |  | $\cdots$ |  |  |  |  |  |
| $C$ | 0.85 | 0.75 | 0.83 | 0.84 |  |  |  |

## 2. Stochastic Consequence

## $R_{k}$ : If $x_{1}$ is $A_{1}^{k}$, and $\cdots$ and $x_{N}$ is $A_{N}^{k}$ then

$y_{1}$ is $g_{1}^{k}$ and $\cdots$ and $y_{N}$ is $g_{N}^{k}$.

## Result

## 3. Linear Regression Consequence

$$
\begin{gathered}
R_{i}: \text { If } x_{1} \text { is } A_{1}^{i} \text { and } x_{2} \text { is } A_{2}^{i} \text { and } \cdots \text { and } x_{n} \text { is } A_{n}^{i} \\
\text { then } \\
y=a_{1}^{i} x_{1}+a_{2}^{i} x_{1}+\cdots+a_{n}^{i} x_{n}+b^{i}
\end{gathered}
$$

## Result

|  |  |  | $\mathrm{a}_{1}$ | , | $a_{2}$ | $\mathrm{a}_{3}$ | a |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Rule 1 Rule 2 Rule 3 Rule 4 Rule 5 Rule 6 |  |  |  |  |  |  |  |  |
| A, B or C | ${ }^{1}$ | $\mathrm{x}_{2}$ | $\mathrm{x}_{3}$ | $\mathrm{x}_{4}$ |  | y | $\hat{y}$ | OK or Not |
| $\begin{aligned} & \text { A } \\ & \text { A } \\ & \ldots \\ & \hline \end{aligned}$ | $\begin{aligned} & 0.65 \\ & 0.62 \\ & 0.85 \\ & \hline \end{aligned}$ | $\begin{aligned} & 0.80 \\ & 0.68 \\ & 0.7 \\ & 0.75 \end{aligned}$ | $\begin{aligned} & 0.20 \\ & 0.20 \\ & \ldots .83 \\ & 0.83 \end{aligned}$ | $\begin{aligned} & 0.08 \\ & 0.08 \\ & 0.84 \\ & \hline \end{aligned}$ |  |  |  |  |
| $M_{1} \cdot y_{1}+M_{2} \cdot y_{2}+\cdots+M_{6} \cdot y_{6}$ |  |  |  |  |  |  |  |  |

## IV. Fuzzy Clustering

## 1. Fuzzy Relation

## 2. Combining two Fuzzy Relations

## Max-Min Composition Formula

$$
\begin{gathered}
\mu_{R_{A \circ B}}(x, z)=\max \left\{\min _{y}\left\{\mu_{R_{A}}(x, y), \mu_{R_{B}}(y, z)\right\}\right\} \\
\text { E.g. } \\
\mu_{R} \circ \mu_{R}(2,3) \\
=\max \{\min (0.4,0.5), \min (0.5,0.8), \min (0.6,0)\} \\
=\max \{0.4,0.5,0\} \\
=0.5 \\
\text { when } \\
{\left[\begin{array}{ccc}
0.1 & 0.2 & 0.3 \\
0.4 & 0.5 & 0.6 \\
0.7 & 0.8 & 0.9
\end{array}\right] \circ\left[\begin{array}{ccc}
0.3 & 0.1 & 0.5 \\
0.2 & 0.7 & 0.8 \\
0.9 & 0.4 & 0
\end{array}\right]}
\end{gathered}
$$

## 3. Clustering by Similarity

Algorithm 1 1. Calculate a max-min similarity-relation $R=\left[a_{i j}\right]$
2. Set $a_{i j}=0$ for all $a_{i j}<\alpha$ and $i=j$
3. Select $s$ and $t$ so that $a_{i j}=\max \left\{a_{i j} \mid i<j\right.$ and $\left.i, j \in I\right\}$. When tie, select one of these pairs at random

WHILE $a_{\text {st }} \neq 0$ DO put $s$ and $t$ into the same cluster $C=\{s, t\}$ ELSE [4.] ELSE all indices $\in I$ into separated clusters and STOP
4. Choose $u \in I \backslash C$ so that

$$
\sum_{i \in C} a_{i u}=\max _{j \in I \backslash C}\left\{\sum_{i \in C} a_{i j} \mid a_{i j} \neq 0\right\}
$$

When a tie, select one such $u$ at random.
WHILE such a $u$ exists, put $u$ into $C=\{s, t, u\}$ and REPEAT [4.]
5. Let $I=I \backslash C$ and GOTO [3.]

## Repeat until no change, e.g.,

Starting with

$$
\left[\begin{array}{ccc}
1 & 0.2 & 0.3 \\
0.4 & 1 & 0.6 \\
0.7 & 0.8 & 1
\end{array}\right] \circ\left[\begin{array}{ccc}
1 & 0.2 & 0.3 \\
0.4 & 1 & 0.6 \\
0.7 & 0.8 & 1
\end{array}\right]
$$

repeat composition until no change

$$
\left[\begin{array}{ccc}
1 & 0.2 & 0.3 \\
0.4 & 1 & 0.6 \\
0.7 & 0.8 & 1
\end{array}\right] \Rightarrow\left[\begin{array}{ccc}
1 & 0.3 & 0.3 \\
0.6 & 1 & 0.6 \\
0.7 & 0.8 & 1
\end{array}\right] \Rightarrow\left[\begin{array}{ccc}
1 & 0.3 & 0.3 \\
0.8 & 1 & 0.6 \\
0.8 & 0.8 & 1
\end{array}\right] \Rightarrow\left[\begin{array}{ccc}
1 & 0.3 & 0.3 \\
0.8 & 1 & 0.6 \\
0.8 & 0.8 & 1
\end{array}\right]
$$

Example 1 Starting from the following $10 \times 10$ proximity-relation $R^{(0)}$, let's apply the the algorithm above. Assume now $\alpha=0.55$.

$$
R^{(0)}=\left[\begin{array}{cccccccccc}
1 & .7 & .5 & .8 & .6 & .6 & .5 & .9 & .4 & .5 \\
.7 & 1 & .3 & .6 & .7 & .9 & .4 & .8 & .6 & .6 \\
.5 & .3 & 1 & .5 & .5 & .4 & .1 & .4 & .7 & .6 \\
.8 & .6 & .5 & 1 & .7 & .5 & .5 & .7 & .5 & .6 \\
.6 & .7 & .5 & .7 & 1 & .6 & .4 & .5 & .8 & .9 \\
.6 & .9 & .4 & .5 & .6 & 1 & .3 & .7 & .7 & .5 \\
.5 & .4 & .1 & .5 & .4 & .3 & 1 & .6 & .2 & .3 \\
.9 & .8 & .4 & .7 & .5 & .7 & .6 & 1 & .4 & .4 \\
.4 & .6 & .7 & .5 & .8 & .7 & .2 & .4 & 1 & .7 \\
.5 & .6 & .6 & .6 & .9 & .5 & .3 & .4 & .7 & 1
\end{array}\right]
$$

By repeating $R^{(n+1)}=R^{(n)} \circ R^{(n)}$ till $R^{(n)}=R^{(n+1)}$.
In this way, similarity-relation $R^{(n)}$ will be calculated as:

$$
R^{(n)}=\left[\begin{array}{cccccccccc}
1 & .2 & .5 & .8 & .6 & .2 & .3 & .9 & .4 & .3 \\
.2 & 1 & .3 & .6 & .7 & .9 & .2 & .8 & .3 & .2 \\
.5 & .3 & 1 & .5 & .3 & .4 & .1 & .3 & .7 & .6 \\
.8 & .6 & .5 & 1 & .7 & .3 & .5 & .4 & .1 & .3 \\
.6 & .7 & .3 & .7 & 1 & .2 & .4 & .5 & .8 & .9 \\
.2 & .9 & .4 & .3 & .2 & .4 & .1 & .3 & .7 & .2 \\
.3 & .2 & .1 & .5 & .4 & .1 & 1 & .6 & .1 & .3 \\
.9 & .8 & .3 & .4 & .5 & .3 & .6 & 1 & 0 & .2 \\
.4 & .3 & .7 & .1 & .8 & .7 & .1 & 0 & 1 & .1 \\
.3 & .2 & .6 & .3 & .9 & .2 & .3 & .2 & .1 & 1
\end{array}\right]
$$

$$
\begin{gathered}
c c c \\
{\left[\begin{array}{cccccccccc}
0 & .7 & 0 & .8 & .6 & .6 & 0 & .9 & 0 & 0 \\
.7 & 0 & 0 & .6 & .7 & .9 & 0 & .8 & .6 & .6 \\
0 & 0 & 0 & 0 & 0 & 0 & 0 & 0 & .7 & .6 \\
.8 & .6 & 0 & 0 & .7 & 0 & 0 & .7 & 0 & .6 \\
.6 & .7 & 0 & .7 & 0 & .6 & 0 & 0 & .8 & .9 \\
.6 & .9 & 0 & 0 & .6 & 0 & 0 & .7 & .7 & 0 \\
0 & 0 & 0 & 0 & 0 & 0 & 0 & .6 & 0 & 0 \\
.9 & .8 & 0 & .7 & 0 & .7 & .6 & 0 & 0 & 0 \\
0 & .6 & .7 & 0 & .8 & .7 & 0 & 0 & 0 & .7 \\
0 & .6 & .6 & .6 & .9 & 0 & 0 & 0 & .7 & 0
\end{array}\right]}
\end{gathered}
$$

$$
\begin{gathered}
\text { Firstly, set } \\
I=\{1,2,3,4,5,6,7,8,9,10\} \text { and } C=\{ \} . \\
\text { Then apply [3.] and [4.] }
\end{gathered}
$$

3. Now $a_{18}=a_{26}=a_{510}=0.9$ are maximum and $a_{18}$ is randomly selected. Then $C=\{1,8\}$.
4. $a_{12}+a_{82}=a_{14}+a_{84}=1.5$ are maximum and $j=4$ is randomly selected. Then $C=\{1,8,4\}$.

## Repeat [4.]

4. $a_{12}+a_{42}+a_{82}=2.1$ is maximum, then $C=\{1,8,4,2\}$.
5. There are no $j$ such that $a_{1 j}+a_{2 j}+a_{4 j}+a_{8 j}$ is maximum. Then final $C=$ $\{1,8,4,2\}$.
$\star a_{16}+a_{26}+a_{46}+a_{86}=0.6+0.9+0+0.7=2.2$ seems maximum but actually not because $a_{46}=0$

Note that $\sum_{i \in C} a_{i u}=\max _{j \in I \backslash C}\left\{\sum_{i \in C} a_{i j} \mid a_{i j} \neq 0\right\}$

Next
5. Let $I=\{3,5,6,7,9,10\}$
3. $a_{510}=0.9$ is maximum. Then renew $C$ as $\{5,10\}$.
4. $a_{59}+a_{109}=1.5$ is maximum. Then $C=\{5,10,9\}$.
4. There are no $j$ in $\{3,6,9\}$ such that $a_{5 j}+a_{9 j}+a_{10 j}$ is maximum. Then final $C=\{5,10,9\}$.

## Further

5. Let $I=\{3,6,7\}$.
6. Now $a_{36}=a_{37}=a_{67}=0$. Then $\{3\},\{6\}$ and $\{7\}$ are three separated clusters.

> In fact
> $\left[\begin{array}{lll}a_{33} & a_{36} & a_{37} \\ a_{63} & a_{66} & a_{67} \\ a_{73} & a_{76} & a_{77}\end{array}\right]=\left[\begin{array}{lll}0 & 0 & 0 \\ 0 & 0 & 0 \\ 0 & 0 & 0\end{array}\right]$

So

$$
\sum_{i \in\{3,6,7\}} a_{i u}=\max _{j \in\{3,6,7\}}\left\{\sum_{i \in C} a_{i j} \mid a_{i j} \neq 0\right\}
$$ does not exit any more.

## Excercise

1. Create a target set to be classified such as Russian alphabet
2. Apply the algorithm above and cluster them.

## 4. The other composition forumula

Besides (i) Max-Min composition:

$$
\mu_{R_{A \circ B}}(x, z)=\max \left\{\min _{y}\left\{\mu_{R_{A}}(x, y), \mu_{R_{B}}(y, z)\right\}\right\}
$$

we have a cuple of other formulae: (ii) max-prod

$$
\begin{gathered}
\left.\mu_{R}(x, y)=\max _{z \in X}\left\{\mu_{R}(x, z) \times \mu_{R}(z, y)\right\}\right\} \\
(\text { iii }) \max -a v g \\
\mu_{R}(x, y)=\max _{z \in X}\left\{\left(\mu_{R}(x, z)+\mu_{R}(z, y)\right) / 2\right\} \\
(\text { iv }) \max -\Delta \\
\mu_{R}(x, y)=\max _{z \in X}\left\{\max \left\{0, \mu_{R}(x, z)+\mu_{R}(z, y)-1\right\}\right\}
\end{gathered}
$$

## E.g.

when

$$
\begin{gathered}
{\left[\begin{array}{lll}
0.1 & 0.2 & 0.3 \\
0.4 & 0.5 & 0.6 \\
0.7 & 0.8 & 0.9
\end{array}\right] \circ\left[\begin{array}{lll}
0.3 & 0.1 & 0.5 \\
0.2 & 0.7 & 0.8 \\
0.9 & 0.4 & 0.0

## V. Time Series Forecasting by Fuzzy Logic

## 1. Fuzzy Time Series

## Challenge 1

$$
\begin{aligned}
& \text { very very small very small small ...... big very big too big } \\
& F(t)=\left[\begin{array}{lllllllllll}
1 & 0.5 & 0 & 0 & \ldots & 0 & 0 & 0 & 0
\end{array}\right] \\
& C(t)=F(t-1)=\left[\begin{array}{lll}
c_{1} & \cdots \cdots & c_{m}
\end{array}\right] \\
& O(t)=\left[\begin{array}{c}
F(t-2) \\
\vdots \\
F(t-w-1)
\end{array}\right]=>\left[\begin{array}{ccc}
0_{11} & \cdots \cdots & 0_{1 m} \\
& \vdots & \\
0_{w 1} & \cdots \cdots & 0_{w m}
\end{array}\right] \\
& R(t)=\left[\begin{array}{ccc}
c_{1} \cdot 0_{11} & \cdots \ldots & c_{m} \cdot 0_{1 m} \\
c_{w} \cdot 0_{w 1} & \cdots \cdots & c_{w} \cdot 0_{w m}
\end{array}\right] \Rightarrow\left[\begin{array}{ccc}
R_{11} & & R_{1 m} \\
& \vdots & \\
R_{w 1} & \cdots \cdots & R_{w m}
\end{array}\right] \\
& F(t)=\left[\max \left(R_{11}, R_{21}, \cdots, R_{w 1}\right) \cdots \cdots \quad \max \left(R_{1 w}, R_{22}, \cdots, R_{w w}\right)\right]
\end{aligned}
$$

## Excersize

1. With $m$ being 6, i.e., big decrease, decrease, no change, increase, big increase, too big increase, estimate $F(1977)$ by the data from 1972 to $1976(w=6)$
2. calculate the center of gravity. This is the predicted value of the year
3. Then predict 1978 in the same way
4. Repeat 2. and 3. till 1992
5. Plot the points predicted, and compare the actual data

Yet another dataset

| 1990 | 19328 | 1.89 |  |  |  | t j |
| 1991 | 19337 | 0.05 |  |  |  |  |
| 1992 | 18876 | -2.38 |  |  |  |  |

Devide the interval with the largest number of data into 4 sub-interval of equal length 2nd largest into 3, and 3rd largest into 2 with all other intervals remain unchanged.

## Defuzzification

$$
t_{j}=\left\{\begin{array}{l}
\frac{1.5}{\frac{1}{a_{1}}+\frac{1}{a_{2}}} \cdots \text { if } j=1 \\
\frac{2}{\frac{0.5}{a_{j-1}}+\frac{1}{a_{j}}+\frac{1}{a_{j+1}}} \cdots \text { if } 2 \leq j \leq(n-1) \\
\frac{1.5}{\frac{0.5}{a_{n-1}}+\frac{1}{a_{n}}} \cdots \text { if } j=n
\end{array}\right.
$$

- where $a_{j-1}, a_{j}, a_{j+1}$ are the midpoints of the fuzzy intervals $X_{j-1}, X_{j}, X_{j+1}$ respectively.
- $t_{j}$ yields the predicted year to year percentage change of enrollment.
- Use the predicted percentage on the previous years enrollment to determine the forecasted enrollment.

## Excersize

1. Apply the algoritm above.
2. Plot the points predicted, and compare the actual data

## 2. Takagi-Sugeno Formula again

$R_{i}$ : If $y(t-1)$ is $A_{1}^{i}$ and $y(t-2)$ is $A_{2}^{i}$ and $\cdots$ and $y(t-n+1)$ is $A_{n}^{i}$ then $y(t)$ is $g^{i}$.

$$
R_{i}: \text { If } x_{1}(t) \text { is } A_{1}^{i} \text { and } x_{2}(t) \text { is } A_{2}^{i} \text { and } \cdots \text { and } x_{n}(t) \text { is } A_{n}^{i} \text { then } y(t) \text { is } g^{i} .
$$

| $8 / 13 / 2007$ | 13238.24 | 13236.53 | $6 / 26 / 2007$ | 13352.37 | 13337.66 |

## Nine Rules

$R_{01}$ : If $x(t-2)$ is SMALL and $x(t-1)$ is SMALL then $x(t)$ is $\lambda_{1}$ $R_{02}$ : If $x(t-2)$ is SMALL and $x(t-1)$ is MEDIUM then $x(t)$ is $\lambda_{2}$ $R_{03}$ : If $x(t-2)$ is SMALL and $x(t-1)$ is LARGE then $x(t)$ is $\lambda_{3}$ $R_{04}$ : If $x(t-2)$ is MEDIUM and $x(t-1)$ is SMALL then $x(t)$ is $\lambda_{4}$ $R_{05}$ : If $x(t-2)$ is MEDIUM and $x(t-1)$ is MEDIUM then $x(t)$ is $\lambda_{5}$ $R_{06}:$ If $x(t-2)$ is MEDIUM and $x(t-1)$ is LARGE then $x(t)$ is $\lambda_{6}$ $R_{07}:$ If $x(t-2)$ is LARGE and $x(t-1)$ is SMALL then $x(t)$ is $\lambda_{7}$ $R_{08}$ : If $x(t-2)$ is LARGE and $x(t-1)$ is MEDIUM then $x(t)$ is $\lambda_{8}$ $R_{09}$ : If $x(t-2)$ is LARGE and $x(t-1)$ is LARGE then $x(t)$ is $\lambda_{9}$

## A rule representation

| $\times(\mathrm{t}-1)$ |  |  |  |  |  |
| :--- | :---: | :---: | :---: | :---: | :---: |
|  |  | SMALL | MEDIUM | LARGE |  |
| $\times(\mathrm{t}-2)$ | SMALL | $\lambda_{1}$ | $\lambda_{2}$ | $\lambda_{3}$ |  |
|  | MEDIUM | $\lambda_{4}$ | $\lambda_{5}$ | $\lambda_{6}$ |  |
|  | LARGE | $\lambda_{7}$ | $\lambda_{8}$ | $\lambda_{9}$ |  |

E.g.
if $x(t-2)$ is SMALL and $x(t-1)$ is SMALL then $x(t+1)=\lambda_{1}$ if $x(t-2)$ is SMALL and $x(t-1)$ is MEDIUM then $x(t+1)=\lambda_{2}$

## Takagi-Sugeno Formula in this challange

$$
R_{i} \text { : If } x(t-2) \text { is } A_{1}^{i} \text { and } x(t-2) \text { is } A_{2}^{i} \text { then } \lambda_{i}
$$

Estimation of $x(t)$ for inputs $x_{2}=x(t-2)$ and $x_{1}=x(t-1)$

$$
x(t)=\frac{\sum_{k=1}^{9}\left(M_{k}(\mathbf{x}) \cdot \lambda_{k}\right)}{\sum_{k=1}^{9} M_{k}(\mathbf{x})}
$$

where

$$
M_{k}(\mathbf{x})=\prod_{i=1}^{2} \mu_{i k}\left(x_{i}\right)
$$

where $\mu_{i k}$ is membership value of $A_{i}^{k}$

## A Summary Table

| t | $x(t-2)$ | $x(t-1)$ | A 1 | A 2 | $\lambda$ | $\hat{x}(t)$ | $x(t)$ |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| 1 |  |  |  |  |  | ? | 13878.15 |
| 2 |  | 13878.15 |  | LARGE | 3 | ? | 13778.65 |
| 3 | 13878.15 | 13778.65 | LARGE | LARGE | 3 | ? | 13759.06 |
| 4 | 13778.65 | 13759.06 | LARGE | LARGE | 3 | ? | 13820.19 |
| 5 | 13759.06 | 13820.19 | LARGE | LARGE | 3 | ? | 13766.70 |
| 63 | 13408.62 | 13422.78 | MEDIUM | MEDIUM | 2 | ? | 13427.73 |
| 64 | 13422.28 | 13427.73 | MEDIUM | MEDIUM | 2 | ? | 13337.66 |

## Excersize

1. Apply the algoritm above.
2. Plot the points predicted, and compare the actual data
