

Lysenko Boris
the original matrix:

The screenshot shows a Qt Creator window with a file named 'qtcreator_process_stub.exe'. The main area displays a large matrix of numbers, likely a binary or near-binary representation. The numbers are arranged in rows and columns, with some variations in the first few rows. The window has standard Qt Creator interface elements like a toolbar and a sidebar.

after iteration 4:

The screenshot shows the same Qt Creator window after iteration 4. The matrix of numbers is now more uniform, with most cells containing the value 0.8. The first row is labeled 'iteration = 4'. The window interface remains the same.

If <0.55 or =1 then =0

The screenshot shows the Qt Creator window after applying a threshold rule. The matrix is now almost entirely composed of 0s, with only a few 0.8 values remaining. The first row is labeled 'iteration = 4'. The window interface remains the same.

Was bag	Max on:	Value of max	New bag
1,30	3	1.6	1,30,3
