

Contemporary Data Processing Technology (CCOD)

Lab 2 (September 15, 2016)

Fedorov Danil, AS-36

In this practice we continued use a model of two trains on plain loop with length of 1000pixels. On each iteration we change speed adding -2, 0 or +2 at random. Also we have two rules : {if $x \geq 14$ then $z=1$, $x=x-1$ } so in this case speed can be ≥ 0 & ≤ 14 & {if $y \leq 50$ then $z=9$, $x=x-9$ } – in this if some train have distance ≤ 50 to front train \Rightarrow break = 9;

Result:

green speed: 0
red speed: 14

green to red distance: 452
red to green distance: 548

green train brake: 0
red train brake: 1

$\text{Mu_Speed} = 14 \Rightarrow \text{mu_s} = 0;$
 $\text{Mu_Dist} = 548 \Rightarrow \text{mu_d} = 0.6;$
 $\text{Mu_Brake} = 1 \Rightarrow \text{mu_b} = 0;$
 $M = \min(\text{mu_s}, \text{mu_d}) * \text{mu_b} \Rightarrow M = 0 * 0 = 0$

Z will always be equals 0 so Mu will always be 0.
