

Task 1

1. Create 100 random binary-chromosomes each with 20 genes.
2. Fitness is the number of "1" in one chromosome - the more the better.
3. Select 2 chromosomes at random from the better half of the population.
4. Create a child chromosome by a one-point-crossover.
5. Repeat from 2. to 4. 100 times and create the next generation.
6. Repeat 5. until the fitness value does not change any more.
7. Show the result:
 - (1) Display the best chromosome in the 1st, an intermediate & final generation.
 - (2) Display the best and average fitness vs. generation.

Code (Java)

```
import java.util.ArrayList;
import java.util.Arrays;
import java.util.Random;

public class main
{
    static class Chromosome
    {
        int[] genes;
        Chromosome()
        {
            genes = new int[20];
            for(int i = 0; i < genes.length; i++)
                genes[i] = random.nextInt(2);
        }
        int getFitness()
        {
            int count = 0;
            for(int i : genes)
                if(i == 1)
                    count++;
            return count;
        }
    }

    static class Generation

        {
            Chromosome[] random2 = generations.get(generations.size()-
1).get2RandomChromosomes();
            newGeneration.chromosomes[j] = crossover(random2[0], random2[1]);
        }
        newGeneration.sort();
        generations.add(newGeneration);
        generations.remove(0);
        fitnessHistory.add(newGeneration.getAverageFitness());
        System.out.println(i + " " + newGeneration.getAverageFitness() + " " +
newGeneration.getBestChromosome().getFitness());

        if(isLastGenerationUnchanged())
            break;
    }

    Thread.sleep(1000);
}
}

```

Result

- 1) The best chromosome in the 1st generation - 15;
The best chromosome in the last (14th) generation - 20;
- 2)
