

Rules:

- 1) if $x = \text{very slow}$ and $y = \text{very short}$ then $z = \text{very weak}$
- 2) if $x = \text{very slow}$ and $y = \text{very short}$ then $z = \text{weak}$
- 3) if $x = \text{slow}$ and $y = \text{short}$ then $z = \text{very weak}$
- 4) if $x = \text{slow}$ and $y = \text{medium}$ then $z = \text{weak}$
- 5) if $x = \text{medium}$ and $y = \text{medium}$ then $z = \text{medium}$
- 6) if $x = \text{medium}$ and $y = \text{short}$ then $z = \text{strong}$
- 7) if $x = \text{fast}$ and $y = \text{very long}$ then $z = \text{medium}$
- 8) if $x = \text{fast}$ and $y = \text{long}$ then $z = \text{strong}$
- 9) if $x = \text{very fast}$ and $y = \text{very long}$ then $z = \text{very strong}$
- 10) if $x = \text{very fast}$ and $y = \text{long}$ then $z = \text{very strong}$

Calculating a break:

$$0,67(x-2) + x - 3 + x - 4 + x - 5 = 0$$

$$3,67x = 13,34$$

$$x = 3,63$$
